Weekly Progress done by each member:

1. By Sadiq Ali

- Started Studying the front end languages like html , css and a little about JavaScript.
- Cleared the basics for using bootsrap4, and also how to include it in our html files for designing the front pages of our website.
- As i know the site's goals, i design a breif workflow of my project i.e what web pages and features the site requires to fulfill the goal, and to make them as user friendly as possible.
- I started reading about the technologies used in developing a web app like which framework one

should use and which backend language is good for beginners.

2. By Suzain Imteyaz

- I have started taking lectures for html and css so that i can work on front end of our project Documents Directory.
- Started Practicing on html and css to display content effectively in our website.
- Going through the document of bootstrap3 and bootstrap4 for using the inbuilt functions and utilities like grid , container and flex etc.
- I have created a design of my website like how things are going to work on our website. By keeping that design in mind i will take neccessary steps to complete the project.
